FREEDOM PROPERTY INVESTORS · MARKETING REVIEW

PAID MEDIA & MARKETING ANALYSIS

From attention to membership

How Freedom Property Investors turns marketing into revenue — and what to measure next

PREPARED
October 2026

SCOPE
Marketing, conversion & measurement

BASIS
Public information only

Independent analyst review. Not affiliated with Freedom Property Investors. Membership pricing, CAC, conversion rates, revenue mix and retention are not public; figures marked "illustrative" are analytical models, not company results.

THE SHORT VERSION

It is a trust business with a lead-generation front end.

Freedom does not sell a commodity online. It sells a high-consideration advisory relationship, backed by research, access and an end-to-end team. The website creates belief; the masterclass creates intent; the sales conversation converts intent into a member. That distinction changes what marketing should optimise.

01 · THE ENGINE

The masterclass is the hinge, not the website.

The site is a handover, not a closer. Paid attention is converted into a free masterclass registration, then into attendance, then into a one-to-one strategy conversation. The real revenue event happens after the website has done its job.

02 · THE LEAK

The biggest losses are after registration.

Registration is the easy part. Attendance, consultation booking, show-up and close are where high-ticket funnels usually break. A 10-point attendance gain can lift members by roughly 25% at the same media spend — and cut CAC by about 20%.

03 · THE CONSTRAINT

Last-click ROAS is not safe for budget decisions.

The purchase is high-ticket, multi-touch and often closed offline. Platform ROAS over-credits retargeting and brand search, under-credits upper-funnel video, and cannot see the member. Without CRM-to-platform feedback, media buys the wrong event.

04 · THE FRICTION

Proof is strong but inconsistent.

Public pages cite 1,600+, 2,000+, 2,200+ and 2,600+ Google reviews, and live Lorem Ipsum still appears in key sections. In a trust purchase, inconsistency is not cosmetic; it is a conversion tax on every paid click.

RECOMMENDED NORTH STAR

Incremental New Members at Target CAC

One growth number — net new paying members, measured incrementally — governed by three guardrails: a fully loaded CAC ceiling derived from LTV, a 90-day retention/refund check, and incremental ROAS.

Count what pays. Measure what caused it. Protect the economics.

What I would do first

- **Close the measurement loop.** Push HubSpot member events back to Meta and Google as offline conversions.
- **Fix proof and trust.** One review count, no placeholder copy, one clear hero promise.
- **Treat the masterclass as a product.** Registration, reminders, attendance, replay and booking are separate conversion problems.
- **Set a CAC ceiling from LTV and payback.** Do not let platform ROAS set the budget.

Analyst take. The opportunity is not to spend more. It is to convert more of the attention the brand already earns, and to prove which attention creates members. That is a measurement and middle-of-funnel problem before it is a media-buying problem.

01 · THE COMPANY

A premium, data-led property advisory with a founder-led media engine.

Freedom positions itself as Australia's leading property investment advisory, helping time-poor Australians buy high-growth, high-yield investment property with research and an end-to-end team behind them.

What it sells

More than a property recommendation. The observable offer is a structured advisory relationship: a personal investment plan, financial positioning, property selection against a proprietary 13-point criteria, finance and legal support, tax and depreciation guidance, rental guarantees and ongoing portfolio reviews.

Who it serves

- **First-time investors** who want to start safely and do not know where to begin.
- **Experienced investors** who want to scale a portfolio and access off-market or pre-market opportunities.
- **People approaching retirement** who want to convert income and equity into a property-led retirement plan.

How it reaches the market

The front end is education-led: free live masterclasses, free investor resources, founder and expert media appearances, social content, search, and a content hub at `australianpropertyupdate.com.au`. The back end is human: a strategy conversation, then an advisory relationship.

> **Positioning in one sentence.** "For busy Australians who want property wealth but lack the time, data or network to do it alone, Freedom provides research-led selection and an end-to-end team that handles the complexity."

Public fact base

Positioning	"Australia's #1 Property Investment Advisory" (company claim)
Members	10,000+ (company claim)
Team	300+ full-time property experts (company claim)
Transactions	$4 billion+ of property transactions (company claim)
Reviews	2,600+ 5-star Google reviews, 4.8 rating (homepage); other pages show 1,600+, 2,000+ and 2,200+
Founders	Scott Kuru (Founder & CEO) and Lianna Pan (co-founder; qualified actuary and data scientist)
Footprint	Sydney and Melbourne offices; national advisory model
Recognition	AFR #3 fastest-growing company; featured across Nine, Sky News, Domain, REA and others (company-stated)
Tech signal	HubSpot forms and CRM; masterclass landing pages; news and insights hub

Figures are as published on the website in October 2026. They have not been independently verified.

Observable

Positioning, offers, service lines, proof assets, funnel steps, content strategy and public claims. Enough to reconstruct the customer journey.

Inferred

Revenue mix, membership price, CAC, conversion rates, retention and sales capacity. These are modelled from the model's logic, not disclosed.

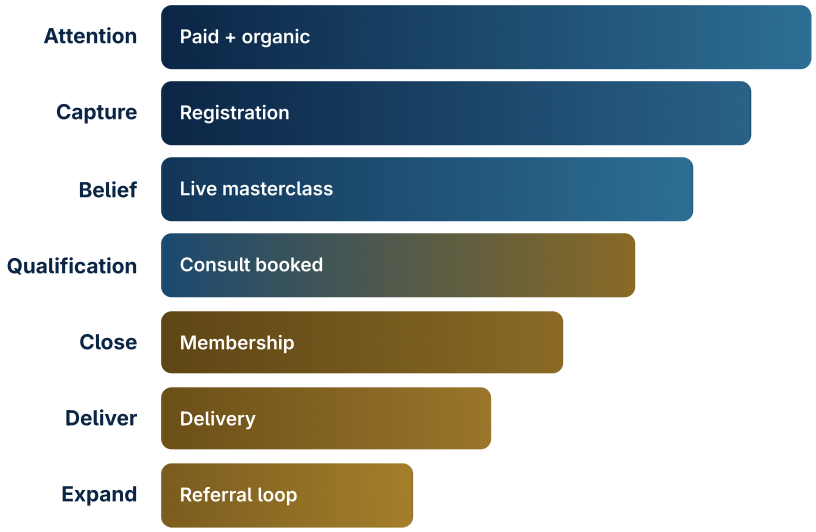

Not available

Contribution margin, refund rates, cohort LTV, channel-level spend and close rates. This review does not pretend to know them; it shows what to measure.

02 · HOW MARKETING BECOMES REVENUE

From attention to membership, in seven handoffs.

The marketing system is not a website checkout. It is a chain of belief-building and qualification steps, each with a different conversion rate and a different owner.

Paid social, YouTube, search, founder media, organic and referrals. **Job:** qualified reach.

Free masterclass, investor resources, direct "Talk to an Expert". **Metric:** registration rate, CPL.

Data/actuary proof, member results, media, guarantees. **Metric:** attendance, replay.

Expert Q&A, fit/readiness check, consultation booking. **Metric:** MQL, booking rate.

One-to-one strategy session → advisory agreement. **Metric:** show, close, CAC.

Property, finance, legal, tax, rental guarantees, portfolio reviews. **Metric:** activation, retention.

Repeat purchases, renewals, referrals, reviews. **Metric:** LTV, referral share, NPS.

THE REVENUE EQUATION

Revenue = Reach × Registration × Attendance × MQL × Booking × Show × Close × First-year value × Retention

Every marketing decision should be judged by which term it moves — and whether it moves that term profitably. Most reporting stops at "registration", which is only the second term.

The website's real job

It creates enough belief and clarity for a qualified prospect to trade their time for a masterclass or a call. It is a handover to a human sales process, not the place where the sale closes. That means the right website metrics are **registration rate, booking rate and show rate** — not "add to cart".

The masterclass's real job

It converts attention into intent by combining education, authority, proof and a next step. The offer bundles four promises — tax reduction, mortgage freedom, boom locations and early retirement — which broadens appeal but also increases the need for qualification.

Three implications

- **Do not optimise to the lead.** A cheap registration that never attends is a cost, not an asset.
- **Do not judge the website on revenue.** Judge it on qualified handoffs; judge the sales team on close.
- **Do not scale media without sales capacity.** The constraint moves from clicks to consultations to closers as spend rises.

03 · THE ECONOMICS

What the model implies for acquisition economics.

The public site does not disclose pricing or revenue mix. But the shape of the offer tells us what must be true economically: high first-year value, a long consideration cycle, and a meaningful share of lifetime value created after the first sale.

Inferred revenue streams

Stream	Role	Confidence	Marketing implication
Membership / advisory fees	Primary acquisition event	High	Justifies a high CAC; must be measured on payback and retention.
Property transaction / referral economics	Deal-linked, lumpy	Medium	Aligns marketing with transaction volume and partner capacity.
Finance / brokerage	Attach and retention	Medium	Raises LTV; adds credit-compliance obligations.
Tax and accounting	Attach / cross-sell	Medium-high	Strengthens the end-to-end promise; supports retention.
Property management / partner services	Retention and referral	Low-medium	Increases lifetime value; needs partner quality control.
Events and education	Top-of-funnel / brand	Low	Useful for demand creation; should not be judged on direct ROAS.

Inferred from public positioning, service descriptions and brand assets. Not company-confirmed. Treat as a hypothesis to validate with finance.

Why LTV matters more than AOV

In a high-ticket advisory, first-year revenue is not the right ceiling for CAC. If a member buys again, refers, or attaches finance and tax services, the lifetime contribution can be multiples of the first fee. The business can rationally pay more than first-year revenue to acquire the right member.

But that logic only holds if **retention, refunds and attach rates** are measured. Otherwise a high LTV assumption becomes a licence to overspend.

ILLUSTRATIVE FUNNEL MATH

Qualified reach	100,000
Registration rate	2.0% → 2,000
Attendance	40% → 800
MQL rate	50% → 400
Consultations booked	40% → 160
Show rate	70% → 112
Close rate	15% → 16.8 members

At an illustrative $12k first-year value, that is ~$201k of revenue. At $50k media spend, media CAC is ~$2,976 and ROAS ~4.0. This is a model, not a benchmark.

The analyst's read. Freedom's model can support a premium CAC, but only if the business knows three things it does not publish: contribution margin per member, cohort retention, and the true cost of the sales organisation. Those three numbers — not the ad-platform ROAS — should set the acquisition budget.

04 · CHALLENGES

Attention is not the scarce resource. Trust is.

The category is crowded, expensive and sceptical. The marketing challenge is to make a high-ticket promise credible at scale, without looking like the noise it competes with.

01

Trust at scale in a sceptical category

Property investment has a long tail of aggressive education and get-rich-quick operators. Buyers arrive with defences up. Generic promises about "boom locations" or "tax to zero" can trigger scepticism rather than desire.

Countermeasure: specific, verifiable proof; named experts; transparent process; conservative claims; strong disclaimers.

02

A commoditised masterclass offer

"Free masterclass + boom locations + tax reduction" is a widely copied format. The offer is strong, but not unique. Differentiation has to come from the quality of the research, the calibre of the live experts and the specificity of the outcomes.

Countermeasure: lead with proprietary data and a live expert experience, not the generic promise.

03

Rising paid costs and creative fatigue

Meta and YouTube costs rise with competition and frequency. Founder-led video can fatigue quickly; the same face and the same four promises lose stopping power. Creative is a variable cost, not a one-off asset.

Countermeasure: a creative factory with founder, data, member-story and expert formats; refresh before CAC moves.

04

Founder and key-person dependency

Scott and Lianna are the brand's credibility. That is an asset, but also a concentration risk: scaling spend without scaling the faces and voices of the brand limits reach and resilience.

Countermeasure: build a bench of named experts and member advocates; diversify formats and channels.

05

Multi-segment complexity

First-time investors, experienced investors and retirees have different motivations, objections, risk tolerance, price sensitivity and lifetime value. One hero message and one nurture sequence under-serve all three.

Countermeasure: segment-specific offers, proof and sales playbooks; measure CAC and LTV by segment.

06

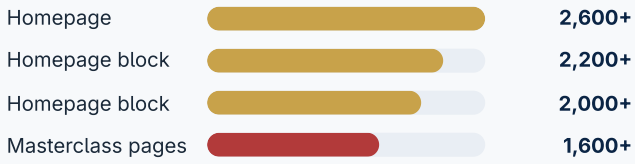

Regulatory and platform risk

Financial and property claims, testimonials, "#1" positioning and performance examples attract scrutiny. Meta and Google also impose verification, targeting and creative restrictions on financial products and services.

Countermeasure: a substantiation file, legal review, compliant creative templates and a single source of truth for claims.

Proof is a conversion asset — and it is inconsistent

Google review counts observed across public pages in October 2026. On a high-trust purchase, four different numbers create doubt and weaken every other claim.

Also live on the site

Lorem Ipsum placeholder copy appears in the "Our Values" section and in the 300+ experts service cards. This is visible to prospects arriving from paid media, including high-intent search traffic.

Quick win: one verified review count, one proof page, no placeholder copy. This is a low-effort, high-certainty conversion improvement that does not require media spend.

05 · CHALLENGES

The money leaks after the form fill.

Most paid-media reviews over-invest in the top of the funnel because that is where the platforms show data. In a high-ticket advisory, the larger variance is usually in attendance, follow-up speed, show rates and close rates.

Leak	Why it happens	What it does to the business	What to do
Registration → attendance	Free offer, low commitment, time-zone friction, weak reminders.	CPL understates cost per attended lead; sales gets no conversation.	Calendar holds, SMS + email cadence, live Q&A, replay window, attendance-based scoring.
Attendance → consultation	Unclear next step, fear of a sales pitch, no urgency.	Strong masterclass produces weak pipeline.	In-session booking, a named expert handoff, a specific next-step offer, same-day follow-up.
Consultation show rate	Low qualification, long gap between booking and call, no pre-call value.	Sales capacity is consumed by no-shows; CAC rises.	Lead scoring, pre-call assets, reminders, rescheduling automation, capacity-aware booking.
Close rate	Price shock, trust gaps, poor fit, variable sales skill.	Media efficiency is blamed for a sales-enablement problem.	Value framing, risk reversal, playbooks, call QA, segment-specific objection handling.
Speed to lead	Manual routing, business hours, lead volume spikes.	High-intent prospects cool; booking and show rates fall.	Five-minute SLA, round-robin routing, instant booking link, escalation alerts.
Lead quality	Broad promises attract curiosity, not capital; weak qualification.	Cheap leads look efficient and destroy sales productivity.	Qualification criteria, better targeting, value-based bidding, predictive lead scoring.
Long lag and offline close	High-ticket decisions take weeks or months; the sale closes in CRM, not on the site.	Last-click misallocates budget; upper-funnel looks worse than it is.	Offline conversions, cohort windows, first-touch + last-touch, geo holdouts.
Sales capacity and consistency	300+ experts, multiple segments, uneven lead flow.	Scaling spend saturates the best closers and dilutes quality.	Capacity model, routing by segment, playbooks, QA, ramp plans tied to media spend.

Sensitivity matters more than benchmarks. A 10-point attendance gain (40% → 50%) raises members by 25% at the same spend and lowers CAC by 20%. A 10% CPL reduction that halves lead-to-member conversion raises CAC by 80%. Cheap leads are expensive.

Quick wins vs strategic bets

Quick wins (weeks): proof consistency, remove placeholder copy, reminder sequence, five-minute lead SLA, creative refresh.

Strategic bets (quarters): closed-loop measurement, segment journeys, predictive scoring, incrementality testing, sales capacity model.

Marketing owns

Reach, registration, attendance, lead quality, creative, channel mix, cost per qualified conversation.

Sales owns

Speed to lead, booking, show rate, close rate, CRM hygiene, segment playbooks, capacity.

Data and finance own

Attribution, offline conversions, LTV, payback, contribution margin, reconciliation and incrementality.

06 · THE NORTH STAR

Incremental New Members at Target CAC.

A North Star should do three things: align marketing, sales and finance; resist gaming; and connect daily work to economic value. Lead volume fails all three. Platform ROAS fails the second and third.

RECOMMENDED COMPANY NORTH STAR

Incremental New Members at Target CAC (INM)

Net new paying members in the period, attributable to incremental marketing activity, where fully loaded CAC is at or below the ceiling implied by lifetime value and payback.

Why this one

- **It counts what pays.** Members are the first revenue event, not registrations or clicks.
- **It demands causality.** "Incremental" forces holdouts or lift tests, so brand and retargeting cannot simply take credit for demand that already existed.
- **It protects economics.** A member acquired above the CAC ceiling is growth that destroys value, so it does not count.
- **It connects functions.** Marketing creates the member, sales closes the member, finance defines the value, data proves the causality.

Options considered — and rejected

Metric	Why not the North Star
Leads / registrations	Easy to grow, easy to game, silent on quality and revenue.
CPL	Cheap leads can be the most expensive members.
Platform ROAS	Attribution-biased, not incremental, ignores payback and retention.
CAC alone	Can be improved by shrinking spend and starving growth.
Members alone	Can be bought at any price; no economic discipline.
Member Lifetime Contribution	The right long-term finance North Star, but too slow for weekly marketing operation.

The CAC ceiling

Set the maximum fully loaded CAC from contribution, not revenue:

```
CAC ceiling = (First-year contribution × LTV multiple) ÷ Target LTV:CAC
```

First-year contribution	LTV multiple	Target LTV:CAC	Max CAC
$8,000	2.0x	4:1	$4,000
$12,000	2.0x	4:1	$6,000
$20,000	2.0x	4:1	$10,000
$12,000	2.5x	4:1	$7,500
$12,000	3.0x	5:1	$7,200

Illustrative only. Use contribution margin after delivery, refunds and servicing — not gross revenue. Fully loaded CAC includes media, sales, marketing operations and content.

Guardrails, not afterthoughts.

Count a member toward INM only if: fully loaded CAC ≤ ceiling; the member is retained for 90 days and not refunded; and the acquisition is supported by incremental evidence (holdout, lift test or a credible attribution model).

07 · THE OPERATING MODEL

From the North Star to the weekly review.

The North Star is a decision tool, not a wall poster. It only works if it decomposes into metrics that channel owners, lifecycle marketers, sales leaders and finance can each move.

Demand

- Qualified reach
- Impressions & frequency
- CTR / hook rate
- Landing-page conversion
- Masterclass registrations
- Cost per registration

Conversion

- Attendance rate
- MQL rate
- Consultations booked
- Show rate
- Close rate
- Lead-to-member

Economics

- Fully loaded CAC
- LTV:CAC
- CAC payback
- MER
- Contribution margin
- Refund / retention

Trust & measurement

- Offline match rate
- Incremental ROAS
- Attribution coverage
- Speed to lead
- Review freshness
- Compliance exceptions

Recommended starting guardrails

Metric	Starting guardrail	Cadence
Masterclass attendance	≥ 55% including replay	Weekly
Speed to lead	80% contacted under 5 minutes	Daily
Lead-to-member	≥ 3%	Monthly
Consultation show rate	≥ 70%	Weekly
Offline match rate	≥ 80%	Monthly
Incremental ROAS	≥ 2.0 on scale channels	Quarterly
LTV:CAC	≥ 4:1	Monthly
CAC payback	≤ 6 months	Monthly

Starting points for discussion, not universal benchmarks. Calibrate to the first clean cohort and revisit quarterly.

Operating cadence

Weekly · act

Spend pacing, CPM/CTR, registrations, attendance, MQLs, calls booked, show rate, speed to lead, creative fatigue. Owner: Head of Growth + channel owners.

Monthly · allocate

CAC by channel and segment, LTV:CAC, payback, lead-to-member, refunds, budget reallocation, sales capacity. Owner: Growth + Finance + Sales.

Quarterly · prove

Geo holdouts, conversion lift, cohort LTV, MMM, brand lift, compliance review, annual plan. Owner: Data + Growth + Finance.

Leading versus lagging

Lead weekly: registration, attendance, speed-to-lead, booking. **Lead monthly:** CAC, LTV:CAC, payback. **Prove quarterly:** incremental ROAS.

The 30-minute weekly review

1) North Star and guardrails. 2) Funnel variance by stage. 3) Creative and channel. 4) Sales capacity. 5) Decisions and owners.

The test of the operating model. Every review should end with a decision, an owner and a date. Otherwise it is a reporting ritual, not a growth system.

08 · THE MEASUREMENT SPINE

Build the measurement before you scale the spend.

The platforms will always report a version of success. The business needs one reconciled view from ad click to member, with offline outcomes fed back to the platforms that created them.

Ad platforms Meta · Google · YouTube → **Landing pages** GA4 · UTMs · consent → **HubSpot** Lead lifecycle · masterclass → **Sales & calls** Booked · held · closed → **Finance** Revenue · refunds · LTV → **Warehouse** Dashboard · cohorts

Close the loop. Send member and refund events back to Meta (Conversions API) and Google (enhanced conversions) as offline conversions. Without this, the platforms optimise to form fills and the business optimises to the wrong number.

Minimum viable stack

- Server-side Google Tag Manager and consent-safe tracking.
- One UTM taxonomy and a channel-mapping dictionary.
- HubSpot lifecycle stages: lead → MQL → consultation booked → held → member → retained/refunded.
- Call tracking with dispositions, not just duration.
- Offline conversion uploads and a monthly match-rate check.
- Cohort LTV and CAC payback by channel and segment.
- Quarterly geo holdouts or conversion-lift tests; MMM only after clean data.
- Data-quality tests and a monthly reconciliation to finance.

90-day sequence

Days 1–30

Tracking audit; define MQL and member; CAPI and enhanced conversions; site trust fixes; masterclass reminder/replay; five-minute SLA.

Proof: member events visible in platforms; attendance and speed-to-lead baselines.

Days 31–60

Segment-specific journeys; creative sprint; reallocate toward efficient channels; lead-scoring v1; weekly dashboard.

Proof: CAC by segment; creative winners; lead-quality lift.

Days 61–90

First geo holdout; cohort LTV; sales capacity model; quarterly planning; compliance review.

Proof: incremental ROAS; payback by cohort; defensible budget decision.

What to stop

Reporting lead volume without quality. Optimising to CPL. Letting platform ROAS set budget. Scaling spend without sales capacity. Running "#1" and performance claims without a substantiation file.

What to start

Offline conversion feedback. Weekly funnel review. Segment-level CAC and LTV. Creative refresh cadence. Quarterly incrementality. A single source of truth for proof.

What to prove

That paid media creates incremental members, not just incremental clicks. That the masterclass creates pipeline, not just registrations. That higher spend still clears the CAC ceiling.

09 · WHAT I WOULD DO NEXT

Ten moves, in priority order.

These are ordered by dependency and impact. Measurement comes first because every later decision depends on it; trust comes second because it taxes every acquisition dollar.

1. **Make the member the unit of measurement**
   Move reporting from leads to members, and from platform ROAS to fully loaded CAC and payback.
2. **Close the offline loop**
   Push member and refund events back to Meta and Google so media optimises to the right event.
3. **Set a CAC ceiling from LTV**
   Derive the maximum fully loaded CAC from contribution margin, LTV multiple and target LTV:CAC.
4. **Treat the masterclass as a product**
   Manage registration, reminders, attendance, replay and booking as separate conversion problems.
5. **Fix proof and trust inconsistencies**
   One verified review count, no Lorem Ipsum, one hero promise, and a substantiation file for every claim.
6. **Build a creative factory, not a campaign**
   Founder-led authority, data explainers, member stories and expert voices, refreshed on a cadence.
7. **Segment the funnel and the scorecard**
   Different offers, proof, nurture and sales playbooks for first-time, experienced and retiree investors.
8. **Make speed-to-lead non-negotiable**
   A five-minute SLA, round-robin routing, instant booking and escalation alerts.
9. **Align sales capacity with media spend**
   Model consultations per week and closers required. Scaling past capacity turns budget into no-shows.
10. **Diversify beyond paid social**
    Search captures intent; partnerships, referrals, reviews and organic content lower blended CAC.

What I would not do.

Scale on platform ROAS. Judge YouTube on last-click CAC. Optimise to CPL. Buy leads without sales capacity. Repeat unsubstantiated claims. Build MMM before the CRM data is clean.

Measurement

Member events in platforms; match rate ≥80%; one reconciled CAC.

Conversion

Attendance ≥55%; 80% of leads contacted in 5 minutes; lead-to-member ≥3%.

Economics

Blended CAC -8% to -12%; payback ≤6 months; first incremental read.

THE BOTTOM LINE

Freedom already has the hard part: a differentiated offer, credible expertise and a market that wants the outcome. The next stage is not more attention — it is **better conversion of the attention it earns**, and the measurement to prove which attention creates members.

APPENDIX

Sources, assumptions and limitations.

Public sources reviewed

- Freedom Property Investors homepage — positioning, proof assets, methodology, services, success stories and reviews. `freedompropertyinvestors.com.au`
- "How We Help First Time Investors" — target segment, free resources and proof. `/services/first-time-investor`
- Contact page — offices, phone, email and "Register for FREE NOW" call to action. `/contact`
- "The 2026 Boom Locations" masterclass page — offer, four promises, live expert format and registration CTA. `/masterclass-boom-locations`
- "Pay Off Your Mortgage in 7 Years" masterclass page — offer and registration CTA. `/masterclass-pay-off-your-mortgage`
- Public Australian media and awards references as displayed on the site (Today Show, AFR, Domain, REA, Nine, Sky News).

Reviewed 26 October 2026. Public pages change; figures and claims should be re-checked before use.

Analytical assumptions

- Membership pricing, revenue mix, CAC, conversion rates, retention and sales cost are not public. Any numbers in this document are illustrative models, not company results.
- The funnel order and revenue streams are inferred from the public customer journey, service descriptions and brand assets.
- "Fully loaded CAC" includes media, sales, marketing operations, content and tools. "Media CAC" is media-only and understates the true cost.
- LTV should be contribution-based, after delivery, refunds and servicing. The CAC ceiling examples use contribution before those adjustments and are therefore optimistic.
- Incremental ROAS requires a holdout, lift test or credible causal model. Platform-reported ROAS is not incremental ROAS.

Glossary

CAC: cost to acquire one paying member, fully loaded.

LTV: contribution expected from a member over the relationship.

MER: revenue per dollar of total media spend.

iROAS: incremental revenue divided by spend, measured against a holdout.

MQL: a lead that meets the agreed fit and intent criteria.

Offline conversion: a CRM event (member, refund) sent back to an ad platform.

Geo holdout: withholding spend in matched regions to measure incremental effect.

Scope and disclaimer.

This is an independent marketing and paid-media analysis based on publicly available information. It is not financial, investment, legal or tax advice, and it is not affiliated with or endorsed by Freedom Property Investors. Any regulatory or compliance observations require review by qualified Australian legal and compliance advisers.

What would change this view

- Observed cohort LTV materially below the assumption.
- High refund or early-churn rates.
- Sales capacity or property supply as the binding constraint.
- A property-market or credit cycle that changes buyer urgency.
- Platform policy or regulatory changes that restrict targeting or claims.
